

Time Trends Findings

Presentation 3

Julia, Sophia, and Varun

Recommendations

1. Optimize staffing schedules to match call volume and duration trends, improving efficiency and customer experience (see slide 6 for specifics)
2. Introduce Customer Notification and Confirmation Options that allow customers to confirm or reschedule their callback time through an additional phone prompt.
3. Create non-caller, anonymous resources for more sensitive issues that are seeing call decreases; reallocate staff towards issues seeing call increases

Dashboard Changes

1. Created a more user friendly hierarchical filter

2. Fixed call duration calculation

- Detects when a call is paused (at DisconnectContact1 or DisconnectContact) and resumed (at LegalServerScreenPop).
- Splits total duration into active call segments and sums them, excluding idle time between disconnection and callback.
- Handles complex cases with multiple callbacks, ensuring only true talk or handling time is counted.
- Produces a more accurate and realistic measure of call duration for operational analysis in Power BI.

Call volumes and durations peak in the morning, as well as towards the beginning of the week, with exception

- Most menus show a consistent pattern:
 - High call volume and longer durations in the morning, followed by a steady decline throughout the day.
 - Skewed because users are encouraged to call first thing in the morning
- Call times and durations also tend to be higher at the beginning of the week compared to the end of the week
- Upon analysis, select menus exhibit different trends
 - Understanding when call volume and duration peak helps with staffing optimization and availability planning.

StaffDirectorySpanishTransfer menu peaks later in the day compared to other menus, indicating different engagement timing among Spanish-speaking callers.

Average Calls by Starting Hour and Weekday

Average Call Duration per Starting Hour by Starting Hour and Weekday

Menu Filters

- > ☐ SeniorsMenu
- > ☐ Miscellaneous
- > ☒ MainMenu
 - > ☐
 - > ☐ AddressFaxHoursMenu
 - > ☐ AppointmentMenu
 - > ☐ ComplimentOrComplaintMenu
 - > ☐ HolidayPrompt
 - > ☐ LanguageSelectionMenu
 - > ☐ StaffDirectoryEnglishTransfer
 - > ☒ StaffDirectorySpanishTransfer

Calls to the Seniors menu and its submenus show significantly higher average durations and peak earlier in the day, suggesting these interactions are more complex and time-sensitive than other caller groups.

Senior Menus: Average Calls by Starting Hour and Weekday

6.59

Senior Average Call Duration per Starting Hour

Non-Senior Menus: Average Calls by Starting Hour and Weekday

2.61

Non-Senior Average Call Duration per Starting Hour

Optimize staffing schedules to align with call behavior patterns and improve response efficiency.

- Increase staffing coverage in the **mornings and early in the week** to match the higher call volume and longer call durations during these peak periods.
- Extend **Spanish-speaking** staff availability later in the day to better accommodate the later activity peak among Spanish-speaking callers.
 - Coverage from 11 am to 3 pm is essential
- Allocate additional training and support staff to **Seniors** menu topics, and schedule staff trained in these areas to work morning shifts, since these calls tend to be longer and peak earlier in the day, indicating higher complexity and support needs.

Calculating Number of Callbacks

- Saved all Contact Session ID's with 'EP name' == 'Courtesy Callback Telephony EP'
- Deleted rows before the first instance of 'Courtesy Callback Telephony EP'
- Counted individual callbacks based on day, not Contact Session ID
- 'Activity name' == 'LegalServerScreenPop' and 'Agent name' presence → callback picked up

More than a quarter of callbacks are not being picked up.

Callbacks Picked Up vs. Not Picked Up

🔍 📄 ...

26.33%

of all callbacks are
not picked up

Introduce Customer Notification and Confirmation Options.

- Enable customers to confirm or reschedule their callback time through another phone prompt.
 - “You are scheduled for a callback shortly – press 1 to confirm or 2 to reschedule”
- Helps ensure that callbacks occur when the customer is actually ready to answer, minimizing missed connections and reducing wasted agent time.
 - Lead to a drop in missed callbacks.

Understanding Call Spikes Is Key to Doing More with Less

- Legal aid already operates on thin budgets, and shifting policies and a volatile economy make grants and donations unpredictable
- Call volumes often exceed capacity—many people seeking help can't get through or face long wait times
- Demand likely does not rise evenly between issues; it some menu options spike at specific times—certain days, weeks, or policy moments see surges while others stay quiet
- By understanding and anticipating these spikes, resources can be allocated when and where they're needed most—helping the organization serve more clients without increasing costs

Call volume overall increasing between 2024 and 2025;
trend to continue for foreseeable future

Despite this overall increase, four menu types are seeing monthly decreases (I/IV)

Despite this overall increase, four menu types are seeing monthly decreases (II/IV)

Despite this overall increase, four menu types are seeing monthly decreases (III/IV)

Despite this overall increase, four menu types are seeing monthly decreases (IV/IV)

Introduce anonymous resources for menus seeing call volume decreases; reallocate staff to menus seeing call volume increases

- Despite overall call volumes increasing, Benefits, HIV, Immigration, and SeniorsADAPT menus are seeing decreased usage
 - But these issues are not being solved, rather people are just less comfortable talking about them/don't think they can access those services due to recent policy changes
- Create a **plain-language online resource library** with short, multilingual guides on common legal topics (e.g., benefits appeals, senior rights, immigration updates, HIV-related discrimination)
 - Builds trust, helps people self-identify their legal issues, and encourages informed engagement with legal aid services.
- Pilot an **anonymous chat or text support** option to let clients ask initial questions confidentially and safely—especially valuable for sensitive issues like immigration status, health, or benefits—lowering fear and re-engaging communities hesitant to call.
- Reallocate call staff to help with other issues/menu types that continue to exceed intake capacity

Next Steps

- Using the logic for different callback cases, analyze trends in the time between calls and callbacks (the period I cut out of duration) using my hierarchical filter
- Look into 26% of callbacks that are not picked up.
 - How many times they were called back on average.
 - What menu options they were calling for.
 - What time of the day they were called back.
- Continue to drill down if there are trust issues for the four issues seeing call volume decreases:
 - Examine where callers are disconnecting for each menu prompt, implying callers may be hanging up early due to discomfort with sensitive topics, pointing to trust, stigma, or usability barriers
