

STAT390: LegalAid Chicago

6th Nov 2025

Outline

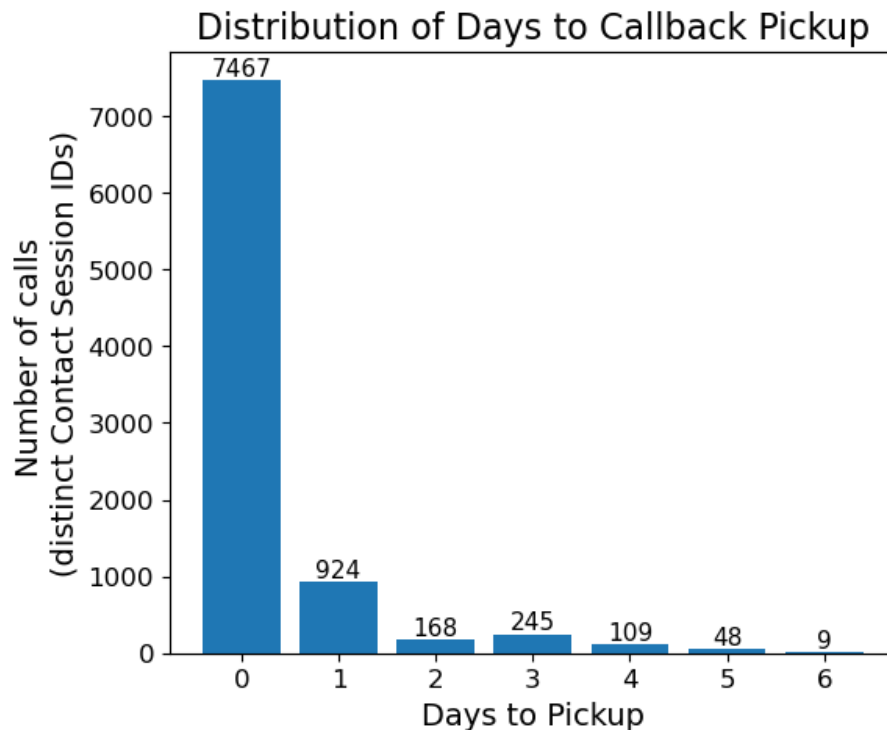

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Call back analysis

- **Callback analysis**
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Call back analysis

- Callbacks were requested for 9,158 calls in the past 1.5 years – around 24 requests per weekday
- 81% of these called numbers were successfully called back within the same day
- 98% of these called numbers were successfully called back within 6 days

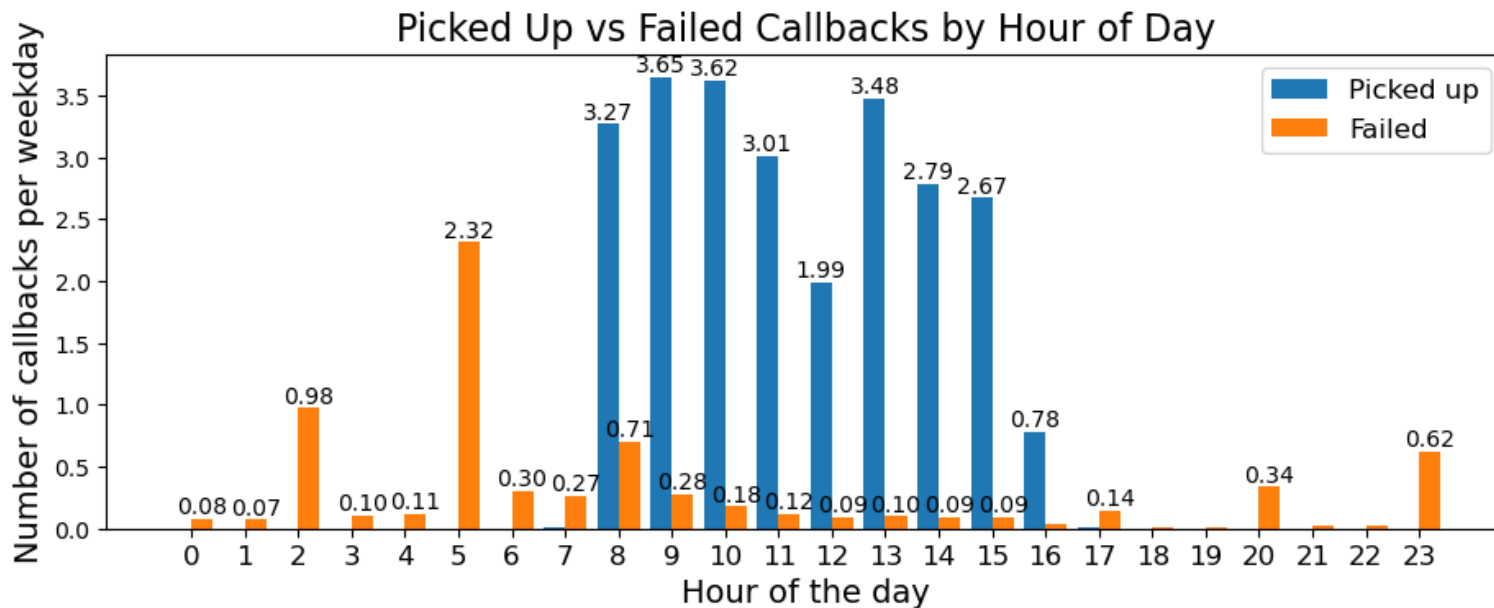

**Days to pickup callback = number of days between 'PlayCCBConfirmation' and 'LegalServerScreenPop'; Call duration of 98% of these calls with an agent is more than 30 seconds indicating a pickup. Activity name is 'CallbackRetry' with no 'LegalServerScreenPop' or 'Agent Name' for failed callbacks (i.e., callbacks not picked up)*

Call back analysis

- On an average, there are 165 calls per weekday that navigate to a queue, but 132 of them reach a Closed queue. Or, 80% of the calls that navigate to a queue end up in a closed queue
- However, LegalAid is able to successfully callback 98% of the callers requesting callback
- LegalAid seems to callback almost everyone who scheduled a callback. Then, why not schedule more callbacks to serve more people? This assumes that LegalAid has the capacity to schedule more callbacks
- **Action item 1:** Thus, if queue length is increased before a caller gets a closed queue message, more callbacks will be scheduled, and LegalAid will be able to reach more callers
- **Action item 2:** If LegalAid doesn't have the capacity to take more callbacks, then they can still schedule more callbacks and prioritize depending on the legal issue

Call back analysis

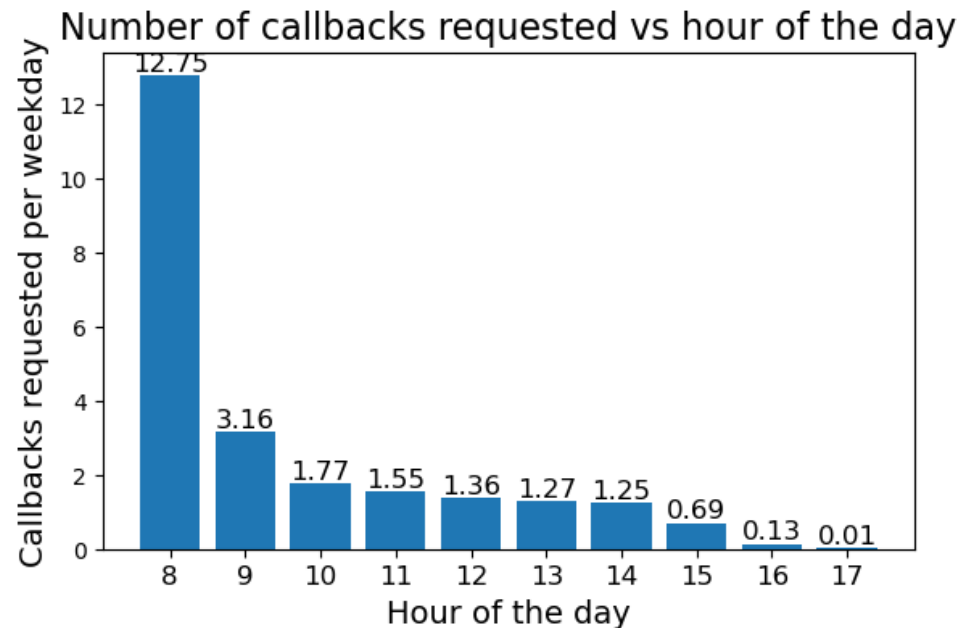

- There are 5 callbacks, on an average, outside of business hours that are never picked up!
- **Action item 3:** Reschedule morning callbacks to afternoon to get more pickups and serve more callers

**Pickedup calls – calls with 'LegalServerScreenPop'; Call duration of 98% of these picked-up calls with an agent is more than 30 seconds indicating a pickup. Activity name is 'CallbackRetry' with no 'LegalServerScreenPop' or 'Agent Name' for failed callbacks (i.e., callbacks not picked up)*

Call back analysis

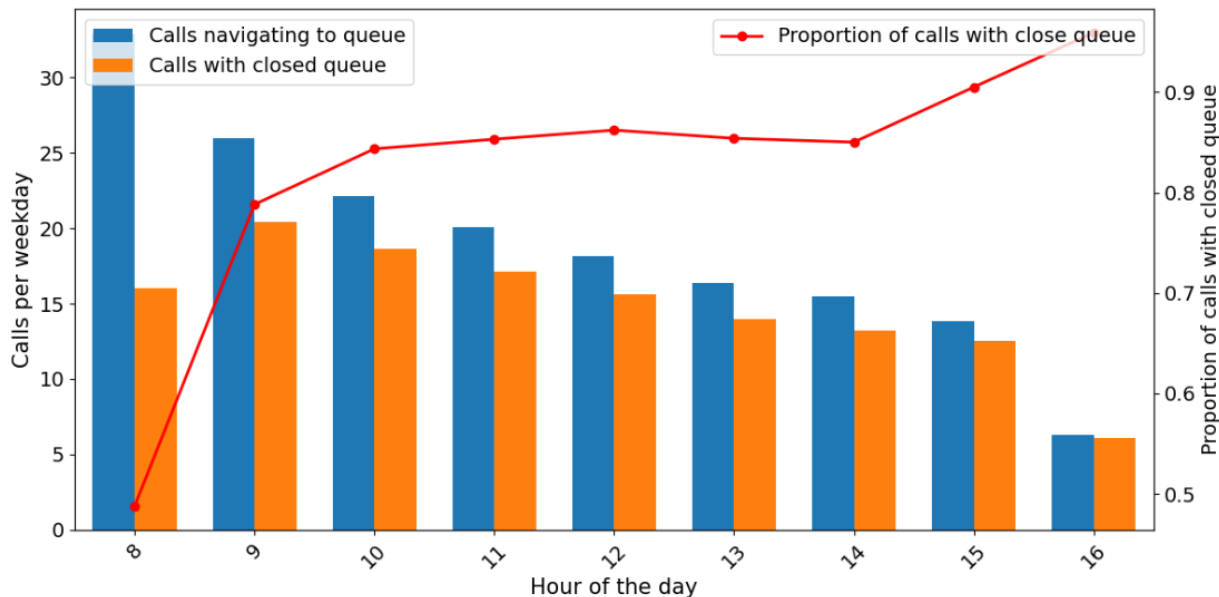

- Due to high call volumes in the morning, most of the callbacks are requested in the morning

**Callback request is recognized when Activity Name = 'PlayCCBConfirmation'*

Call back analysis

- Queue length seems to be the longest in the morning, as the highest proportion of callers are able to wait in the queue or schedule a callback at 8 am
- Action item 4:** Schedule more callbacks for callers calling between 9 and noon to proportionately serve all types of callers

**Callback request is recognized when Activity Name = 'PlayCCBConfirmation'*

Call abandonment analysis

- Callback analysis
- **Call abandonment analysis**
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Call abandonment analysis

- [Presentation 1 \(Meera\)](#)
- [Presentation 2 \(Sana\)](#)
- [Presentation 3 \(Adam\)](#)
- [Presentation 4 \(Marcos\)](#)
- Key insights from the presentations:
 - The abandonment rate is around 5% for the top 4 legal menus. As per industry standards, 5 -8% abandonment rate in IVR (interactive voice response) calls is acceptable
 - As we are able to calculate abandonment rate from CAR, we don't need the Legal Menu summary reports anymore
 - Benefits menu has a large proportion of callers leaving the menu (to be explored more later)

Queue-wait times analysis

- Callback analysis
- Call abandonment analysis
- **Queue-wait times analysis**
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Queue-wait times analysis

- [Dashboard](#)
- Key insights from the dashboard:
 - Queue wait times are the:
 - shortest for callers scheduling callbacks (7-11 minutes),
 - longest for callers waiting to talk to an agent without scheduling a callback (>1 hour)
 - Intermediate for callers abandoning queue (20 – 30 minutes)
 - **Action item:** Callers can be told about their estimated wait times if they wish to talk to an agent without scheduling a callback, given time of the day, and day of week

Front desk analysis

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- **Front desk analysis**
- Seasonal (monthly) call trends
- Seniors vs Non-seniors analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Front desk analysis

- [Presentation \(see slide 12\)](#)
- Key insights from the presentation:
 - 3500 calls (around 10 per weekday) to the main menu are reaching the front desk, and navigating back to the main menu, showing the need for human guidance to the caller to navigate the menu
 - Around 1000 of the above calls (around 3 per weekday) navigate again to the front desk
 - **Action item:**
 - Identify which types of callers or menu paths lead to confusion
 - Determine how to make it easier for callers to get to the right place without needing to rely on the Front desk as a middle step

Seasonal (monthly) call trends

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- **Seasonal (monthly) call trends**
- Seniors vs Non-seniors analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Seasonal (monthly) call trends

- [Dashboard 1](#) (Varun)
- [Dashboard 2](#) (Jasmine)
- Key insights from the dashboards:
 - Call volumes seem to have a distinct pattern for certain legal menus
 - Figuring out reasons for some of the patterns may help with resource allocation

Seniors' vs Non-seniors' analysis

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- **Seniors' vs Non-seniors' analysis**
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Seniors' vs Non-seniors' analysis

- [Dashboard 1 \(Jasmine\)](#)
- [Dashboard 2 \(Julia\)](#)
 - Key insights from the dashboards:
 - Seniors' calling times are somewhat different from non-seniors' – may help in proportionally scheduling callbacks
 - Call duration for Seniors' is more than twice that of non-seniors' (2.5 vs 6.5 minutes). If this is not expected, then we should figure out the reason for the difference

Discrepancy between CAR and All Calls data

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- **Discrepancy between CAR and All Calls data**
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Discrepancy between CAR and All Calls data

- [Presentation \(slide 2\)](#)
 - Key insights from the presentation:
 - There is a systematic difference between the number of inbound calls in CAR and All Calls data to the 6 intake lines:
 - Farmworker main number calls (312-431-2299)
 - Legal Aid main number calls (312-341-1070)
 - Transfers to the English main menu (312-506-8646)
 - Transfers to the Spanish main menu (312-506-8647)
 - Old ADAPT number calls that route to the Legal Aid main menu (312-229-6080)
 - Old Benefits Enrollment number calls that route to the Legal Aid main menu (312-347-8342)
 - Given that the All Calls data corresponds to 284 Professionally licensed users and 3 workspaces, and the CAR (Customer Activity Record) Report corresponds to 8 standard agents and 10 premium agents, can this difference be due to something like premium agents' calls' not being in All Calls data?

Question on 8300

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- Discrepancy between CAR and All Calls data
- **Question on 8300**
- Call journey redundancies – Main menu & Legal Menu
- Q&A & feedback

Question on 8300

- [Presentation \(slide 4 & 5\)](#)
 - Key insights / questions from the presentation:
 - 1070 with around 85 calls per weekday accounts for 27.5% redirections to 8300. About 72% of those redirections are because of "No answer"
 - 5398 with around 70 calls per weekday accounts for a total of 23.1% redirections to 8300. All the redirections due to "No answer"
 - What does a "no answer" imply, and why does it redirect to 8300 in such a case?

Call journey redundancies – Main menu & Legal Menu

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- **Call journey redundancies – Main menu & Legal Menu**
- Q&A & feedback

Call journey redundancies – Main menu & Legal Menu

- Presentation
 - Key insights / questions from the presentation:
 - Get rid of keys 5 and 7 in the main menu
 - Consolidate keys 2 and 6 of the main menu
 - Almost 1/3rd callers swap from family menu to ‘Other legal’ menu. Are there some family-adjacent issues not directly serviceable in the family submenu?
 - 37% of callers do not successfully reach a queue in the housing menu, indicating a need to review the menu verbiage.

Call journey redundancies – Main menu & Legal Menu

- Callback analysis
- Call abandonment analysis
- Queue-wait times analysis
- Front desk analysis
- Seasonal (monthly) call trends
- Seniors' vs Non-seniors' analysis
- Discrepancy between CAR and All Calls data
- Question on 8300
- Call journey redundancies – Main menu & Legal Menu
- **Q&A & feedback**
