

Main Menu Abandonment

Sana Nanlawala

Abandonment Scenarios:

- Leaving in a queue where an agent had NOT connected (front desk transfers, staff directory transfers, etc.)
- Leaving after a directional menu (main menu, appointment menu, help with legal or other menu)
- Leaving after receiving No Activity from Customer prompt
- Leaving after no activity, just remaining in the LAC Main flow
- Leaving during Language Selection

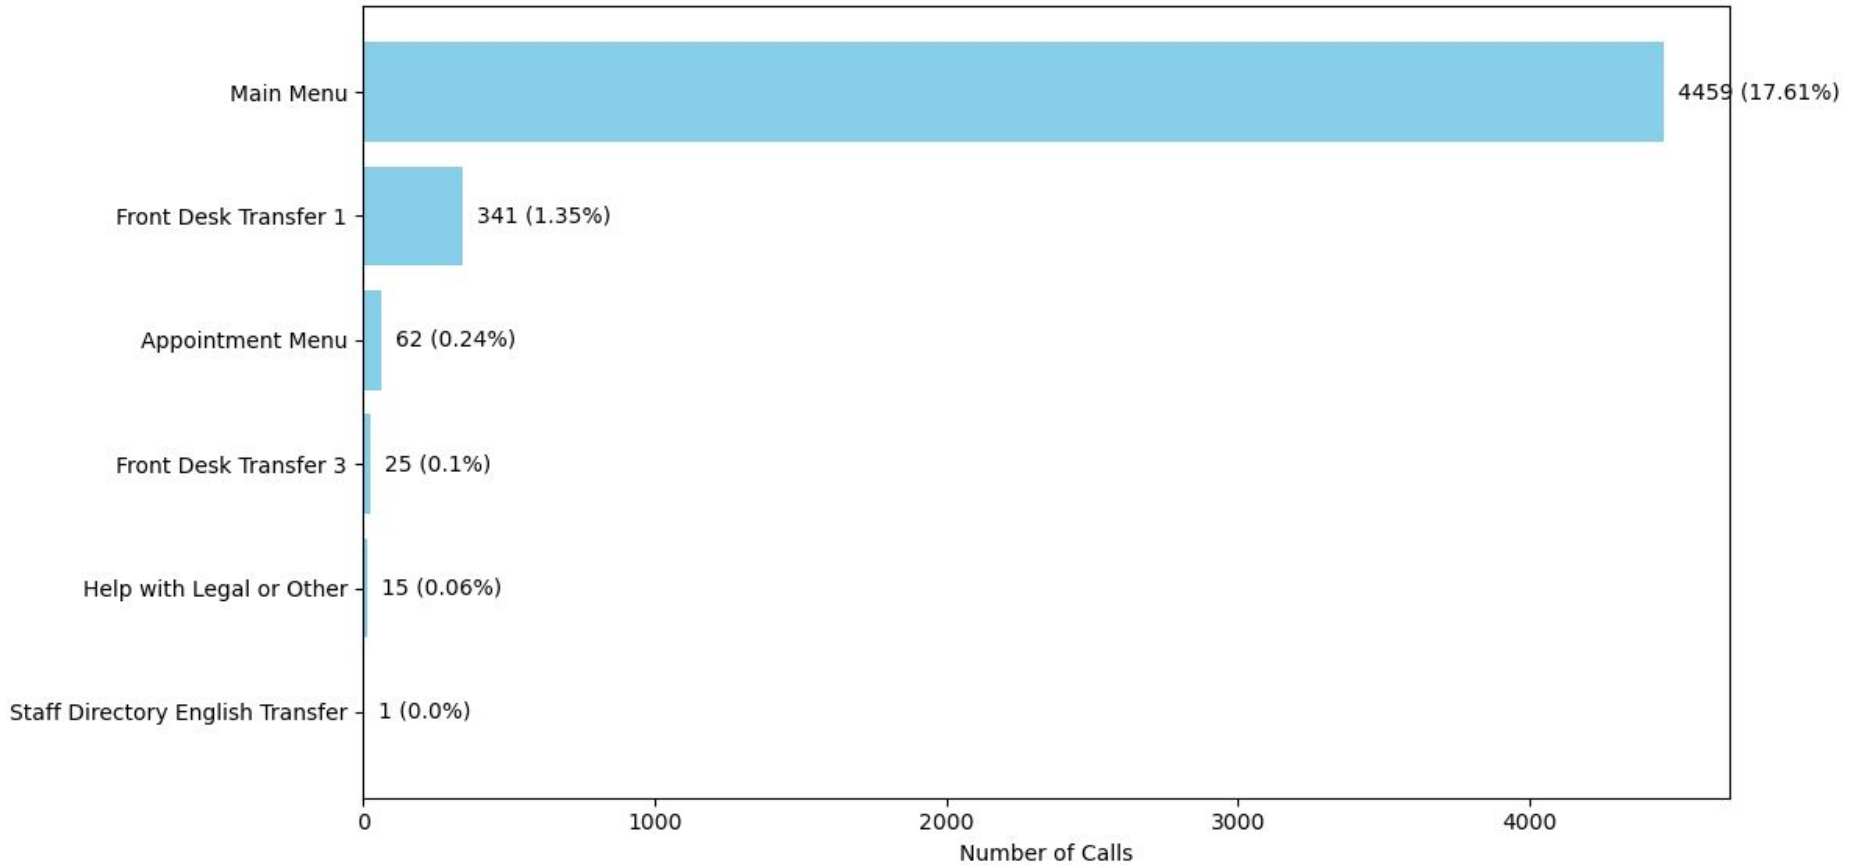

83,314 calls entered the Main Number EP. Of these calls, 34,331 ended in the Main Number EP.

Abandonment Scenarios:

Filtering these calls, 9,014 calls ended after the Language Selection Menu., 109 ended with NO_ANSWER_FROM_CUSTOMER, and 9 in which customers left after staying in the LAC Main flow (no activity). These activities were *before* entering the main menu and were not included in the abandonment analysis.

There were 25,199 calls that entered the Main Menu and left within the Main Menu. Of these calls, 4903 were abandoned, 19.46%.

Call Abandonment Across Main Menu

Takeaways:

The majority of people leave immediately after entering the main menu. This seems likely for customers to hang up earlier rather than later.

Of the abandonment scenarios within queues, the majority of calls *were* connected with an agent which is good!

Front Desk Transfer 1 had the “highest” number of calls where an agent was not connected (341 out of 2,886, or 11.8%), but this is still a relatively small portion of total calls.

Front Desk Transfer 3 had 25 calls without an agent out of 194 total calls (12.9%).

All other queues, including Front Desk Transfer 2, Staff Directory (English and Spanish), and Clinic Voicemail, had almost no calls abandoned, with percent connected at or near 100%.
