

Presentation 5: Time-series Trends

Bonsitu, Jasmine, Katherine, Muse

Main & Legal menu call flow dashboard updates

1. Combined Main and Legal menu call flow dashboards into singular page, with buttons to toggle between tabs

[Dashboard Link](#)

Main Menu Trends

1. Spike in callers with legal issues in January (23% increase compared to prev. month), 6% increase in call volume in 2025 vs. 2024.
 - a. Mostly driven by callers with non-senior family issues

Recommendations:

- Make relevant family issues legal information accessible on Legal Aid's website.
- Direct callers to external resources, particularly DV support.

[Dashboard Link](#)

Main Menu Trends

2. Seniors and non-seniors equally likely to call with legal issues earlier in the week, but non-seniors call earlier in the morning, compared to seniors with legal issues.

- a. Non-senior legal: 22% of weekly calls on Mondays vs. 17% on Fridays, 32% of calls before 10 am
- b. Senior legal: 23% of weekly calls on Mondays vs. 19% on Fridays, 26% of calls before 10 am

3. Suburban Seniors became more likely to reach a closed queue on Fridays beginning around May/June 2024

- a. Before June 2024: most likely to reach Closed Queue on Mondays & Tuesdays
- b. After June 2024: most likely to reach Closed Queue on Fridays
- c. Overall decrease in suburban senior calls ending in closed queue

————→
Recommendation: staff trained senior intake specialists consistently on Fridays

Called Number Analysis

Improvements since last version

- Preserved Individual Number Identifiers: Stopped grouping distinct numbers into a generic "Unknown" category to enable tracking of high-frequency sources
- Refined DAX logic for "Calls per Weekday": Corrected the denominator to include the total weekdays in the dataset range, fixing a previous issue where zero-call days were excluded

	Correlation ID	Call Flow	num_legs	Number Description_1	Number Description_2	Number Description_3	Number Description_4

Legal Menu Seasonal Traffic: Employment

Findings:

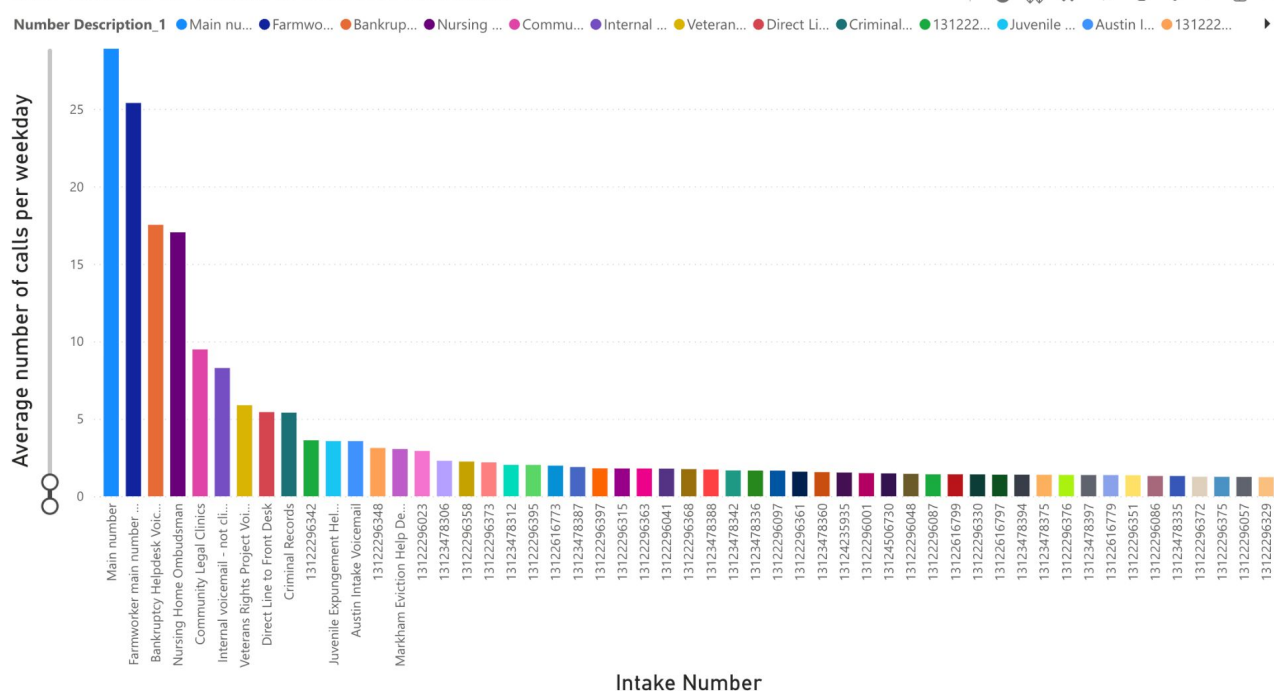

- Spike in employment-related issues in June and July of 2025
 - People may be looking for new jobs during the summertime -> calls dip in the fall
 - 12.2 avg. weekday calls in May 2025 -> 16.3 avg. weekday calls in July 2025 (34% increase)
 - The vast majority of these calls go to Closed Queue
 - After navigating into Employment EP line, the majority of people will be placed in the closed queue
 - 9.0 avg. weekday calls in May 2025, 12.0 avg. weekday calls in July 2025 (approx. ~75%)
- Around 70% of calls went to closed queue throughout the year

Recommendations:

1. ~~_____ Hire~~ more intake specialists to handle employment issues
2. Give links on the Legal Aid website to potential employment opportunities

Call Volume by Intake & Transfer Numbers

Call Volume for Intake & Transfer Numbers

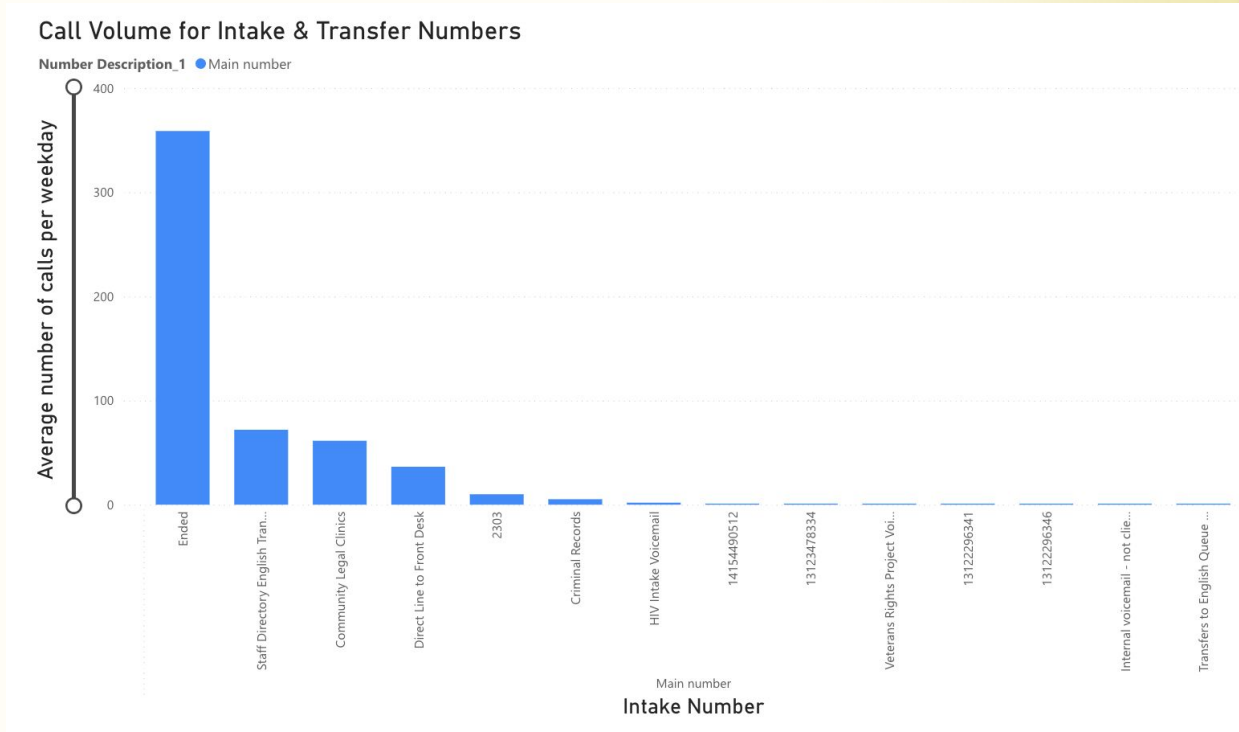

Findings

- **Main Number** received the most calls (~530 per weekday), followed by **Farmworker Main Number** (~20) and **Bankruptcy Helpdesk Voicemail** (~17)
- There are **375 unique numbers** as intake lines → consider merging them for better efficiency

Dashboard Link

Main Number Call Journeys – First Transfer Level

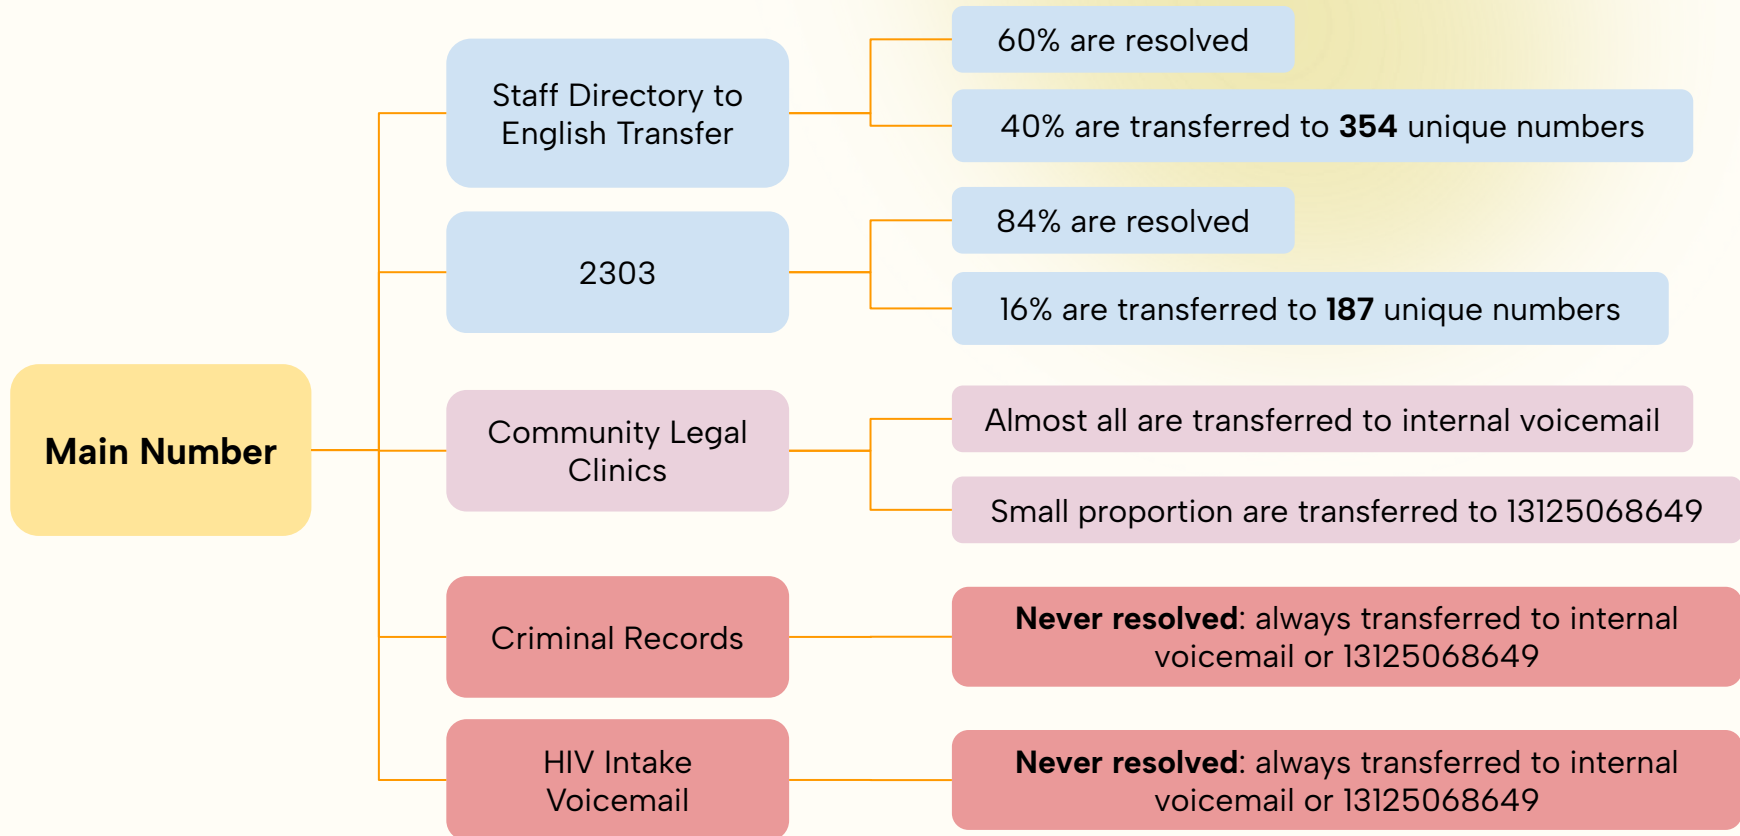

Findings

- **High Retention:** 65% of the calls are resolved without transfer
- **Top Transfer Destinations:** most went to Staff Directory English Transfer (72), Community Legal Clinics (61) and Direct Line to Front Desk (36)

Next Steps

- Since Community Legal Clinics and Direct Line to Front Desk are intake lines themselves, we can think about ways to **promote direct dialing** to bypass Main Number

Main Number Call Journeys – Second Transfer Level

Next Steps

1. Investigate the "Catch-All" Number (1-312-506-8649)

- Observation: This specific number appears as the endpoint for three different intake lines (Community Legal Clinics, Criminal Records, HIV Intake Voicemail)
- Question: Is this a central overflow line? An external call center? A specific case manager?

2. Identify Extension 2303

- Observation: High volume, high "scatter" rate (187 unique transfers)
- Hypothesis: This behaves like a secondary operator or a "General Inquiries" line

Known/Unknown Numbers and Legal Menu Categories

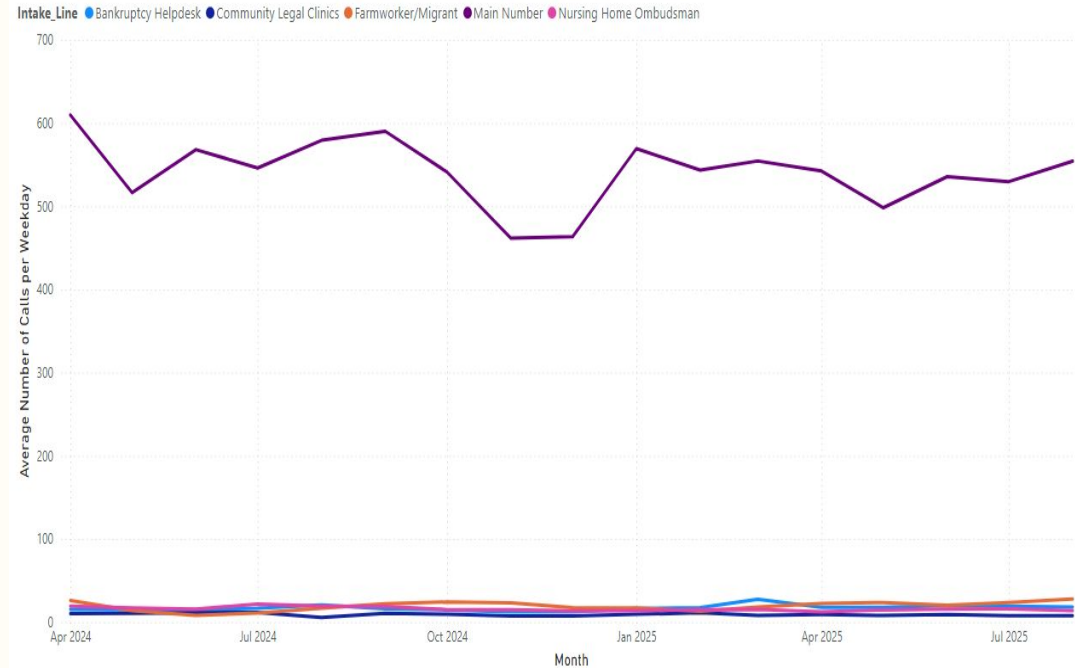

- Used both the All Calls and CAR dataset this time since All Calls misses phone menu journey. CAR misses direct dials. Which is why Trafficking Survivor calls weren't appearing initially in the last presentation.
- Plot 1 of known and unknown numbers using All Calls dataset:
 - Extracted first leg of each call to get the intake line originally dialed.
 - Mapped 26 known phone numbers to intake line names (e.g., "Main Number", "Farmworker/Migrant").
 - Identified 351 unknown numbers for further investigation.
- Plot 2 of Legal Menu Categories using CAR dataset:
 - Mapped EP Names to 7 legal menu categories (Family, Housing, Benefits, etc.).
 - Used the last activity per session to identify caller's final destination.
 - Tracked Abandoned – No Selection for callers who hung up before choosing.

Average Call Volume of Known Intake Lines

- Among the known intake lines, Main Number had the most amount of calls, and averaged between 461 – 609 calls per day.
- Bankruptcy Helpdesk, Community Legal Clinics, Farmworker/Migrant, and Nursing Home were the next 4 most frequent but still significantly less and this trend in across all lines and months.

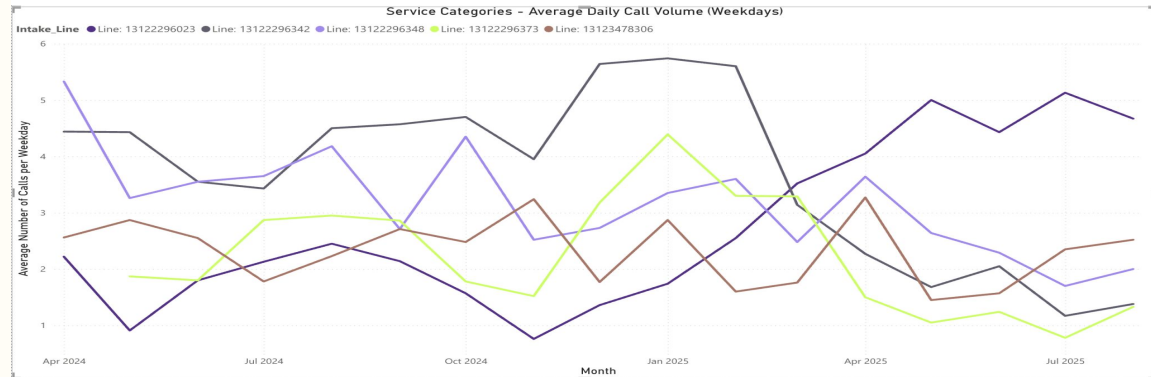

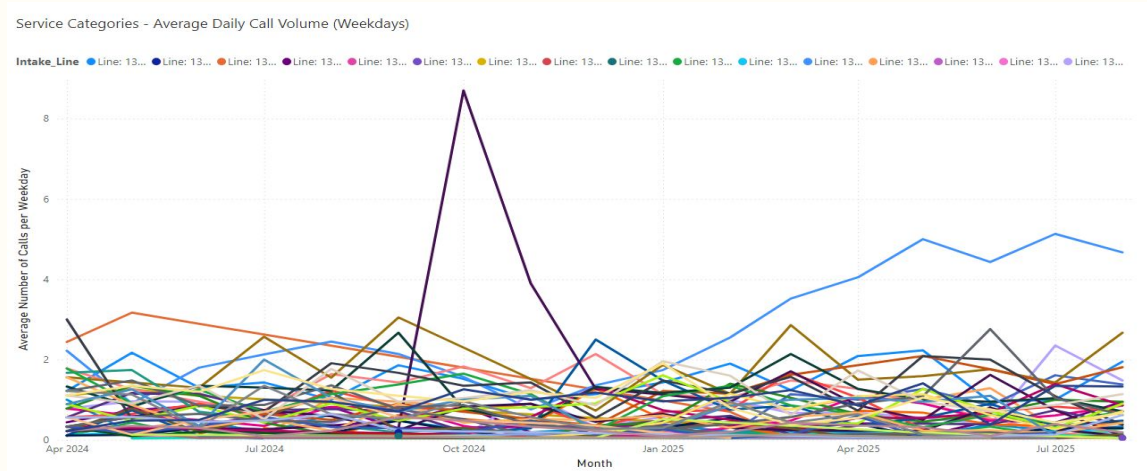

[Link](#)

Known Intake Lines - Average Daily Call Volume (Weekdays)

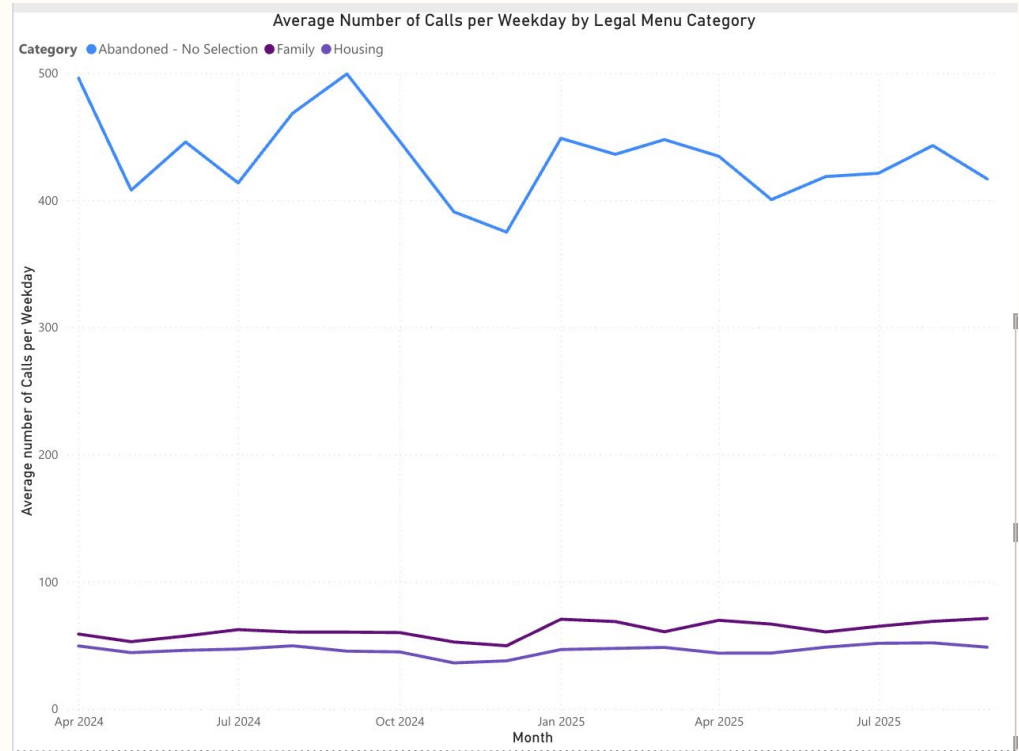

Average Call Volume per day for Unknown #s

- There are over 300 unique numbers in the All Calls dataset, with most only being being called once per day.
- The top 5 called numbers were:
 - 13122296023
 - 13122296342
 - 13122296348
 - 13122296373
 - 13123478306
- Amongst the top 5 numbers they were utilized on average 2-6 times per day.
- One number ending in 6048 was used 9 times in October, which is the largest spike seen.

Average Number of Calls per Weekday by Legal Menu Category

- The average number of calls per category show that the majority of calls results in the person hanging up, meaning they're abandoned.
- September 2024 had the highest abandoned calls in 2024 (499), while September 2025 dropped to only 416 the second lowest month that year.
- But there isn't a downward trend that would indicate the rate of abandoned calls is decreasing overall so it may just be the result of fewer calls rather than improvement.

[Link](#)

Next Steps

- Continue to plot the rate of abandoned calls over the next year to see if any feedback used is leading to an overall decrease in the rate of abandoned calls.
- Ask Cynthia what the numbers that end with the extensions 6023, 6342, and 6348 correspond with because they were the most commonly used unknown numbers.
- Determine why there are over 300 unique numbers and if they are actually in use.
