

Call Abandonment Scenarios in the Benefits Menu

1. Caller leaves on “veteran benefits voicemail transfer” queue
2. Caller leaves at “Prompt: IVR-BenefitsMenu”
3. Caller leaves on “Benefits or Benefits SP - SSA” queue
4. Caller leaves on “Benefits or Benefits SP - DHS” queue
5. Caller leaves on “Benefits or Benefits SP - Other” queue

It is impossible to differentiate when a caller leaves in the main benefits menu vs. any of the queues mentioned from bullets 3-5

Endpoint of calls that passed through the benefits menu

- Of 2451 unique calls that passed through the benefits menu, only 6.77% of those ended within the menu
- The large majority of calls (93.23%) ended in other menus. With over 50% of calls ending in the closed queue menu (1529)

Abandonment Within the Benefits Menu

- Of the ~7% of calls that ended in the benefits menu, 61.45% of them were abandoned
- At the broader level, 4.16% of calls that went through the benefits menu at some point were abandoned within the menu

Takeaway: Even though abandonment within the Benefits menu is numerically small, its conversion success is critically low — meaning the menu is failing the callers it actually retains
