

Aggregate Trends Group 2

Presentation 3 | Celena, Logan, Jake

Table of contents

01 Callback and Queue Wait Time Metrics

02 Insights from Last Presentation

03 Queue Analysis Dashboard

04 Callbacks vs. Post-Queue Pickups Dashboard/Insights

Some Raw Numbers

- Unique Contact IDs: 11488
 - **Callers who Requested Callback: 8883**
 - **Callers who Waited Until Agent: 631**
 - **Callers who Did not Request Callback: 1974**
- Overall Average Queue Wait Time: 11.37 minutes
- Overall Median Queue Wait Time: 6.18 minutes
- Longest Queue Wait(by average): Housing
- Shortest Queue Wait(by average): Subsenior Other

Initial Insights from Last Class

- Housing Queue Wait Time average far longer in January than usual
- Wait times and traffic for Senior Queues seem to peak in summer.
 - **In July 2025 SubSenior Tenant was the queue menu with the longest wait time.**
 - **In June 2024, there was an average of 4 people in the SubSenior Other Queue per day, which was more than any other queue.**
- Consumer queue wait times and traffic have small spike in August
 - **The consumer queue had an average of 6 people per day in August 2025 with an average wait time of 17 minutes.**
 - **The consumer queue had an average wait time of 19 minutes in August 2024, though only an average of 3 people per day.**

Methodology and Dashboard

- a) Looked at 3 main categories of callers
 - i) Callers that Requested Callback
 - 1) Signified by 'CourtesyCallback' in the 'Flow Name' column
 - ii) Callers that got to an agent
 - 1) Signified by 'LegalServerScreenPop' in the 'Activity Name' Column
 - iii) Callers that entered a queue but did not reach agent or request callback
 - 1) Filtered data for all callers that got a PreQueueMessage2 message
 - 2) Took all callers that did not fall in the above 2 categories

Insights

- Queue wait times were much longer for those who waited to reach an agent vs those who requested a callback.
- The proportion of people requesting a callback **increased** between 2024 and 2025.
 - Legal Aid efforts to encourage / prioritize callback requests seem successful.
 - Proportion of callers abandoning stayed the same, but callers waiting and reaching an agent **decreased** on a whole.
- All senior menus had a **higher** proportion of call **abandonment** / lower proportion of callback requests.

Callbacks vs. Post-Queue Pickups

- How can a caller connect with an agent?
- Callbacks vs. Post-Queue Pickups
 - Callbacks:
‘CourtesyCallback’ in flow name -> ‘LegalServerScreenPop’ activity name
 - Post-Queue Pickup:
Presence of "PreQueueMessage1", "PreQueueMessage2", "QueueMenu1", or "PlayMOH300s" -> ‘LegalServerScreenPop’ activity name

Comparison/Insights

- Callbacks are **more prevalent** than post-queue pickups
- Callbacks have **slightly longer durations**, indicating either:
 - Agents may spend more focused time per callback
 - Callback process streamlining is necessary
- Prioritize resources and training toward handling callbacks efficiently
- Peak call times: 8 AM, 12 PM, 4 PM → staffing and workflow adjustments recommended

Thank you!
