- Call Duration & Count Insights

1. Massive outliers(wait times over an hour) cause large differences in mean outcomes
2. Family, Housing, Consumer, and SubSenior Tenant have the longest mean wait times
3. Family and Consumer also have the largest amount of people in queue
4. Family, followed by housing have the largest percentage of people in queue over certain amounts of time(740 seconds, 1000 seconds, 1500 seconds)

Insights/Recommendations

Queue Time Averages

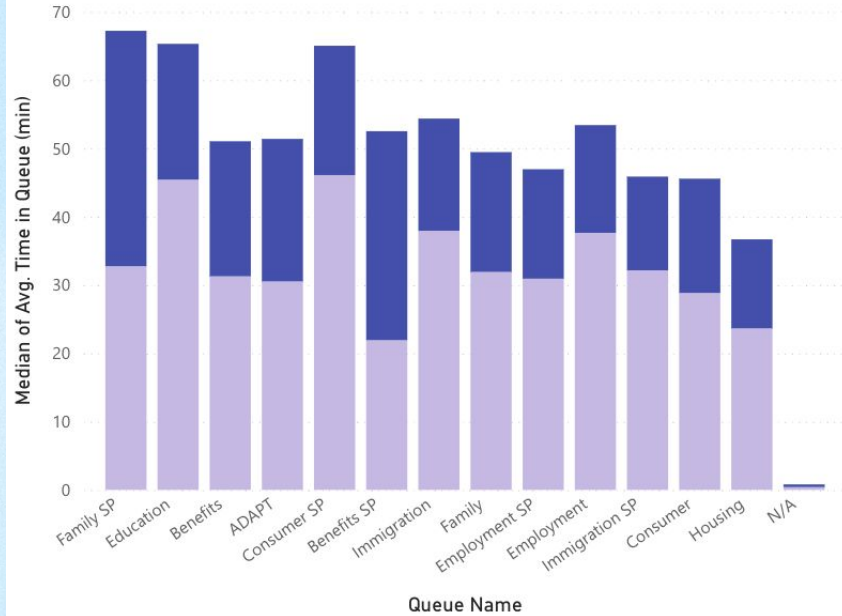

- Could be smart to assign more people to the Family and Consumer Queues
- The different average queue times are not that drastic though

Long Waiters

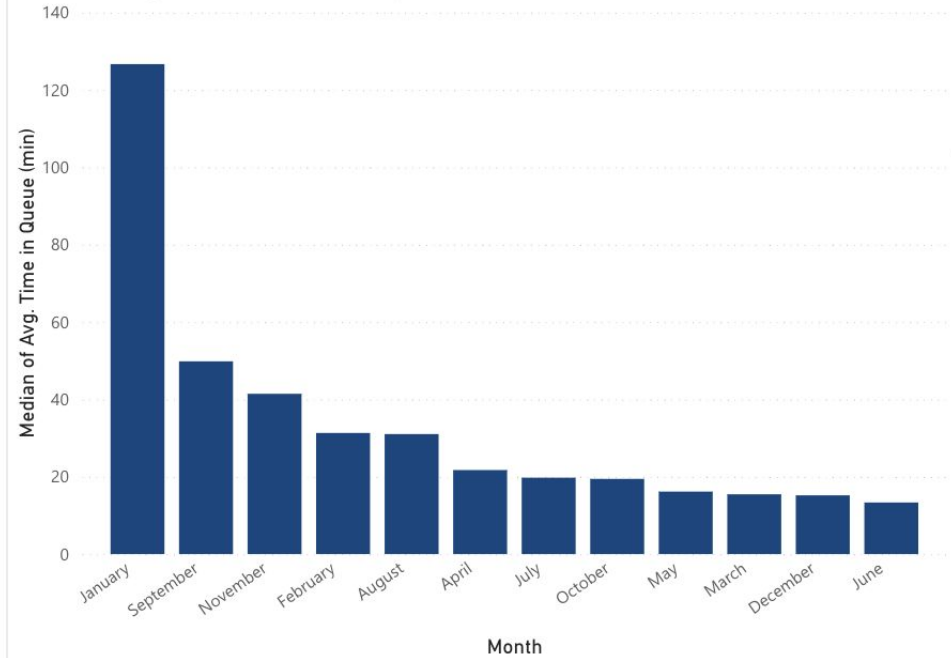

- Family and Housing Queues have the most people waiting long times
- Smart to assign more people to these queues as this would imply people value these menus more

Median of Avg. Time in Queue (min) by Queue Name and year

Year ● 2024 ● 2025

Median of Avg. Time in Queue (min) by Month

21.46

Insights & Recommendations

Wait times change over time

Beyond queue times differing across menus, they also change per menu depending on the month. Overall the median wait time for queues is highest in January, suggesting an increased need for phone staffing at the beginning of the year.

Rotating phone staff for different menus

Since there are monthly changes in which menus have increased queue waiting times, rotating staff on these menus could help reduce the strain. For example, April's highest waiting time is for the consumer menu, which probably corresponds to tax season. July's highest waiting time is for the education menu, as families are likely preparing for the new school year. Using these trends can help Legal Aid decide where to potentially direct extra phone staff throughout the year.

Analysis 1: Weekdays, Open Hours

Analysis 2: Weekdays, Closed Hours- High, unmet demand after hours for Main line

Analysis 3: Weekends (out of office)- High, unmet demand on weekends for Farmworker line

Insights/Recommendations

Handle calls during closed hours/weekends

Weekdays & Closed Hours:

- Extremely high duration of calls for Main line calls

INSIGHT:

- Evaluate the process for handling calls outside of working hours
- Implement an automated system letting callers know the office is closed, and point them to online resources

Weekends (out of office):

- Extremely high duration of calls for Farmworker main number calls (Migrant Legal Assistance Program)

INSIGHT:

- Evaluate how calls are being handled over the weekend, especially for this Farmworker line- why/how are callers reaching this line and spending an unnecessary amount time waiting?
- Implement an automated system letting callers know the office is closed, and point them to online resources

Thank you
