2. Next Steps

Phone Menu Verbiage Analysis: Idea #1

Current Verbiage	Hypothesis / Reason to Consider Change	Analysis Plan	Recommendation (Analysis Dependent)
“If you are calling for help with a legal problem that you have not talked to us about yet, press 3. If you would like to hear about how to meet with a free lawyer in one of our neighborhood clinics, press 4”	Individuals who SHOULD be sorted into the correct queue (4) would be likely to hear the verbiage of 3 and click 3 if they don’t listen to all of the options, creating inefficiency due to improper individual/queue matching which slows the entire phone queue process down.	Ideas: - See how many people who click 3 later back out and click 4 to correct their call journey (logical if people would realize they entered the wrong menu from future menu options) - See how many calls that go through the ‘3’ option end up being unproductive / an incorrect match of caller/queue (logical if people never realize and stay in queue 3) (might be difficult in practice because it is difficult to discern which calls are ‘successful’)	Consolidate 3 and 4 into the same question, then ask a clarifying question which splits these individuals into the correct queue Ex: “If you are calling for help with a legal problem you have not talked to us about yet, or would like to hear about how to meet with a free lawyer in one of our clinics, press 3” - “For on-call advice about a legal problem you have not talked to us about yet press 3. If you would like info about how to meet with a free lawyer in person, press 4”

Phone Menu Verbiage Analysis: Idea #2

Current Verbiage	Hypothesis / Reason to Consider Change	Analysis Plan	Recommendation (Analysis Dependent)
“Our compliment and complaint forms and procedures are available on our website, legalaidthicago.org. If you do not have internet access and would like to file a compliment or complaint, press 1”	The phone lines are already incredibly high-demand, and the supply of phone line operators and legal resources is limited. It may not make sense to offer the opportunity to stay on the phone line to file a compliment or complaint, especially if this could take away resources from someone who needs free legal assistance.	Ideas: - See how many people who click 1 actually end up staying on hold to deliver a compliment or complaint. - Calculate amount of time and resources used by individuals calling regarding a compliments/complaints.	Redirect everyone who wants to share a compliment or complaint to the website, rather than allowing people to stay on the phone line to share a compliment/complaint and potentially take resources away from providing legal help. REVISED: “Our compliment and complaint forms and procedures are available on our website, legalaidthicago.org”

Phone Menu Verbiage Analysis: Idea #3

Current Verbiage	Hypothesis / Reason to Consider Change	Analysis Plan	Recommendation (Analysis Dependent)
“If you are seeking asylum, press 3. If you are calling because you have a case in immigration court, press 4”	This structure is logical if seeking asylum and having a case in immigration court were mutually exclusive. However, what if somebody is seeking asylum AND has a related ongoing case in immigration court? Would LegalAid want these individuals sorted into 3 (Immigration/Immigration SP, subgroup: Asylum) or 4 (Immigration/Immigration SP, subgroup: Immigration Court)?	Ideas: - See how many people who click 3 later back out and click 4 to correct their call journey (logical if people would realize they entered the wrong menu from future time in the queue - See how many calls that go through the ‘3’ option end up being unproductive / an incorrect match of caller/queue (logical if people never realize and stay in queue 3) (might be difficult in practice because it is difficult to discern which calls are ‘successful’ -	Consolidate 3 and 4 into the same question, then ask a clarifying question which splits these individuals into the correct queue Ex: “If you are seeking asylum or have a case in immigration court, press 3” “If you have an ongoing case regarding asylum, press 1. If you are seeking asylum but do not have an active case, press 2. If you have a non-asylum related case in immigration court, press 3. For all other inquiries, press 4”

Phone Menu Verbiage Analysis: Idea #4

Current Verbiage	Hypothesis / Reason to Consider Change	Analysis Plan	Recommendation (Analysis Dependent)
“If you are calling about wages you are owed, press 2. If you are calling about a worker’s compensation issue, press 3.”	This structure is logical if having owed wages and having a worker’s compensation issue were mutually exclusive. However, what if somebody is owed wages AND has a worker’s compensation issue? Would LegalAid want these individuals sorted into 2 or 3? Also, I believe that 2 leads to a queue, while 3 is not a prioritized area for LegalAid, and is redirected to voicemail. However, somebody calling about worker’s compensation would likely click 2 after hearing it, leading to a mismatch between the calls LegalAid wants to serve and some people who click 2.	Ideas: - See how many people who click 2 later back out and click 3 to correct their call journey (logical if people would realize they entered the wrong menu from future time in the queue - See how many calls that go through the ‘2’ option end up being unproductive / an incorrect match of caller/queue (logical if people never realize and stay in queue 2) (might be difficult in practice because it is difficult to discern which calls are ‘successful’ -	Use a pair of questions to successfully support all individuals and sort them into the right groups. “If you are calling about worker’s compensation or wages you are owed, press 2”. (once 2 is clicked) -> If you are currently owed wages, press 1. For all other concerns, press 2.”

Comprehensive Verbiage Analysis

1. Verbiage Identifications and Ideas
2. Next Steps

Next Steps

- Completed: I have gone through all of the provided verbiage very carefully and identified the areas where I think a caller may mistakenly end up in the incorrect queue.
- NEXT STEPS: Now, I want to test these hypotheses with the data and evaluate my findings. Before presentation 2, I want to design and implement a data test for 3-4 of these ideas to either confirm or reject my ideas.
- Then, I will be able to make actionable recommendations depending on my findings!
